

# What is Boundary Protection?

Boundary Protection is the measurements that are put in place to secure your internal business network from less trusted networks – such as the internet. This is the digital equivalent to securing your business premises with locks and alarm systems.

In our experience cyber criminals are increasingly leveraging more and more sophisticated methods of exploiting vulnerabilities in IT systems.

Unfortunately, most businesses are falling behind in recommended IT security levels particularly around appropriately implemented and configured firewalls.

In our experience the use of traditional firewalls and attempts to enforce a one-size-fits-all approach to security, will simply result in a business being under protected and therefore more susceptible to compromise.

**Ask yourself**  
**Does your business?**

**Change default passwords?**

**Have change control procedures in place?**

**Remove firewall rules that are no longer required?**

**Why Choose Axiom?**

- We are a trusted provider of end-to-end cyber security solutions
- We tailor solutions to fit your needs
- We provide experienced consultants at all stages of any engagement.
- Our team understand the current cyber risk vulnerabilities and provide business solutions to mitigate these risks

**Boundary Protection is one of the five key controls that form the focus of Cyber Essentials**
