Cyber Essentials is a UK Government-backed and industry supported scheme to guide businesses in protecting themselves against cyber threats.

The scheme focuses on the following five essential mitigation strategies;

- Boundary Firewalls and Internet Gateways
- Secure Configuration
- Access Control
- Malware Protection
- Patch Management

Organisations can be assessed and certified against this standard. It identifies the risks and security controls that an organisation must have in place within their IT systems in order to have confidence that they are addressing cyber security effectively and mitigating the risk from Internet-based threats.

It provides organisations with clear guidance on implementation as well as offering independent certification for those who want it.

Cyber Essentials is for all organisations, of all sizes, and in all sectors. Organisations are encouraged to adopt the CE requirements as appropriate to their business i.e. tailor them.

Cyber Essentials scheme is a cost effective, government driven cyber-security standard, ideal for small and medium sized enterprises or organisations looking to understand their cyber security risk appetite.

Whilst providing a basic but essential level of protection, the Cyber Essentials scheme enables organisations that believe they are practicing robust cyber security to benefit by making this a unique selling point thereby enabling business.

Upon certification, they can then demonstrate to their customers that their data is adequately protected and that they take cyber security seriously.

For those organisations who may need assistance, Axiom Cyber Intelligence can complete the assessment with you and support the implementation of any missing requirements.
